

About Us

The centre for Maxillofacial, Facial Plastic and Reconstructive Surgery was then a small department which was established in 1993. During the year 1993-1994 wearing seatbelts were not compulsory in the country, the primary focus of the department then was on reconstructing faces injured or badly damaged by road traffic accidents as there were many. In the same year Orthognathic Surgery started and Bone Anchored Craniofacial Prostheses and Hearing Aid service came to existence in coordination with Orthodontists, Audiologists and Otorhinolaryngologists. Initially the department provided a comprehensive spectrum of care in this specialty for the citizens of Brunei Darussalam and its residents.

The department started with only one specialist surgeon with no trained nurses in this area of specialisation. In 1998, the department started training nurses specialised in Cranio-Maxillofacial Surgery accredited by the National Accreditation Council of Brunei Darussalam. Since the inception of this course until to date, 19 specialty nurses have trained in the field of Cranio-Maxillofacial, Facial Plastic and Reconstructive Surgery with some trained in Microvascular Surgery and Neurosurgery Nursing. These Specialist Nurses were trained in leading departments in Cranio-Maxillofacial Surgery under world renowned Cranio-Maxillofacial Surgeons. In late 2004, the department took over the management of Head & Neck Burns in Raja Isteri Pengiran Anak Saleha Hospital.

In 2011, the department introduced Microvascular Surgical Services and its application in Head and Neck Reconstruction and Skull Base Surgery in collaboration with Plastic and Reconstructive Surgery and Neurosurgery respectively.

As number of cases increased and years passed by, Laser Treatment Services commenced in 2008. The department continued to provide its services and uplift the delivery of quality healthcare services to the residents and citizens of Brunei Darussalam

In this changing world, technology and innovation is at its peak. The department started its own 3-D printing in 2015 providing a well-coordinated and planned surgical procedures to patients. The construction of a fully functional Cranio- Maxillofacial Prosthetic Laboratory intensified its state of the art services in the specialty.

Since commencement of the centre, surgical operations for more than 500 cleft lip and palate deformities, 600 tumour cases have been carried out ranging from salivary glands, oral cancers, thyroid cancers to complex skull base tumours and skin cancers of the face, scalp, head and neck region. The centre continue to expand its scope of services including Head and Neck Surgical Oncology except nasopharynx, hypopharynx and larynx.

In June 2016, our centre commenced operations in a newly built centre adjacent to main Radiology Department in the ground floor of Raja Isteri Pengiran Anak Saleha Hospital. This state of the art centre houses our services.

To date, the first stand-alone centre in this region for Maxillofacial, Facial Plastic and Reconstructive Surgery aims to continuously deliver a quality patient-centred and state of the art healthcare services in its specialty. The centre strive towards achieving its vision of emerging as the best centre in Borneo region providing a wholly comprehensive and excellent services in an integrated manner combining Cranio-Maxillofacial, Facial Plastic, Reconstructive Surgery and Head & Neck Surgical Oncology and to emerge as a 24 hour Trauma Centre renowned for Cranio-Maxillofacial Trauma.
