

How does the Laser rejuvenate skin, remove unwanted pigment and remove tattoo?

The laser works by stimulating collagen production. It removes tattoo by the use of specific wavelength of light which passes into the skin but absorb by the ink.

Is the procedure safe?

The Medlite is one of the safest and effective laser treatment on the market today.

What body areas can be treated?

Our lasers can be used for many body areas including the face, hands, legs, neck and chest.

How many treatments will I need?

The results will NOT be obvious after the first procedure, the results may take 4-6 sessions. Give your skin some time to heal beautifully.

What can I expect after the treatment?

Icing will be applied to the patient followed by a skin soothing steroid cream, and the patient may have to continue using it for three days after the procedure.

How do I get started?

Our Doctor will be happy to discuss the right treatment and procedure for you. Feel free to make an appointment for consultation first.

Things to note before/after the procedure:

1. Avoid intense sun exposure 1 week before and after
2. Avoid active skin ingredients 1 week before and after
3. Not to be done in Pregnancy/Lactation / those who are Planning to conceive
4. Remove contact lens before coming for the procedure, preferably wear spectacles when you come for the procedure.

Laser Treatment Services

Maxillofacial, Facial Plastic and Reconstructive Surgery (MFPRSC)

Laser Treatment

The centre for Maxillofacial, Facial Plastic and Reconstructive Surgery is committed in bringing innovation and technology in providing quality services and uplift the delivery of a excellent healthcare service in Brunei Darussalam and its neighboring countries.

The Laser Treatment Services of the centre started in 2008 with Pulsed Dyed Laser Technology for the treatment of scars and vascular conditions.

In 2016, MedLite C6 Laser Technology added a new broader scope to its laser services for treatment of skin pigmentation, tattoo removal and skin rejuvenation.

Our laser treatment professionals are well trained to assess level of pigmentation, determine areas to be treated and can be improved and schedule your treatment series.

MedLite C6 Laser

MedLite C6 is also highly effective on a wide range of additional indications on all patient skin types.

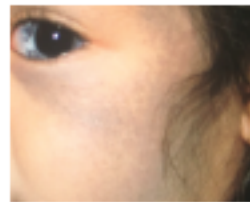

Laser skin rejuvenation is one of the latest and most exciting cosmetic procedures.

The laser stimulates collagen production to generate new collagen decreasing lines and wrinkles.

It offers a proven method to permanently remove most brown age spots, freckles and unwanted pigment.

It also removes tattoo ink with the energy of light using a specific wavelength of light.
